BioID launches face recognition app for Android and releases source code

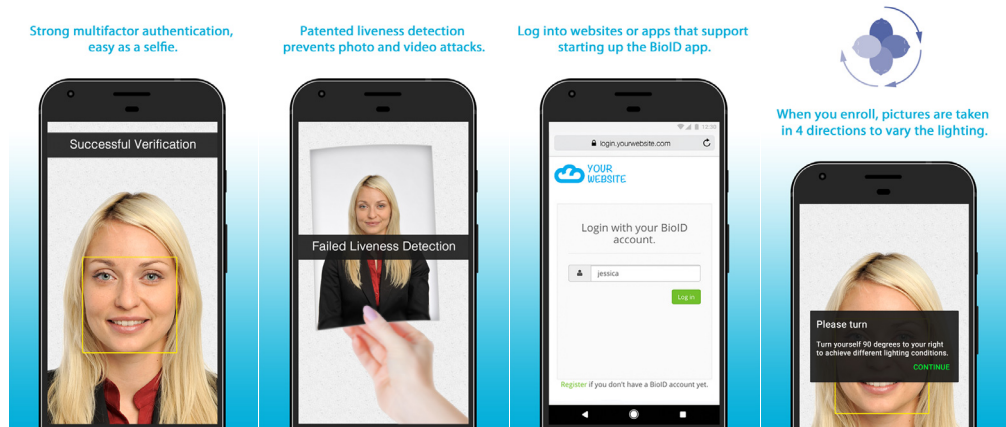

Developers can easily integrate biometrics into iOS and Android apps

Nuremberg, Germany – February 21, 2017 – Cloud biometrics developer BioID today announced the release of the Android version of its face recognition authenticator and the availability of source code for both the Android and iOS versions of the app. While mobile app developers could always integrate BioID's facial recognition via the BioID Web Service API, regardless of platform, the mobile app source code allows developers to more quickly integrate biometric authentication directly into their apps on the two platforms that power the vast majority of mobile devices. Furthermore, with the apps anyone interested in biometric authentication can experience just how secure and convenient face recognition can be.

Since authentication requires both possession of the registered mobile device and the user's physical presence verified through face recognition, mobile developers can offer their end users multifactor authentication without a password. Protection against fraud is provided through BioID's patented liveness detection, which ensures that biometric samples come from a live person and not from a photo or video.

"From the beginning, BioID has focused on making integration of our biometric web service as easy as possible for developers," said BioID CEO Ho Chang. "Our mobile source code provides mobile developers a great tool for quick and easy implementation of biometric recognition, so they can offer their end users a more secure and convenient alternative to traditional authentication."

The BioID facial authenticator is available for free in the [Google Play Store](#) as well as in the [iTunes App Store](#). For more information, please see mobile.bioid.com. Source code is available on GitHub for [Android](#) and [iOS](#).

BioID's facial recognition authenticator enables quick and easy implementation of multifactor authentication in mobile apps and websites.

About BioID

BioID is the cloud biometrics company with advanced solutions for both public and private clouds. The company makes strong, convenient, privacy-assured face, iris and voice recognition available to everyone, on any device, anytime, anywhere so people can be protected in the cyber world and forget about passwords. Guided by the vision that anonymous biometric recognition empowers internet users to secure their online identities with privacy, BioID offers a reliable link between a real person and digital identities by verifying the user's presence in a convenient and natural way – just the way they look and/or the way they sound. Privately held with R&D based in Germany, BioID has offices in Switzerland and the US and its technology has been proven through many years of use at enterprises, banks and government organizations.
